

Configure Samsung SoC Media player for 5th Screen

1. **Step 1. Smart TV Configuration**
2. **Step 2. Retrieve Wired Mac Address**
3. **Step 3. Gestion configuration (this step is for EyeinMedia graphic department)**
4. **Step 4. Samsung System on Chip (SoC) Media Player**
5. **Step 5. Display information about the content playing on the TV(optional)**

Objective: is to set up the 5th screen for it to receive information about the picture or video display that is controlled from the eye-in media server through the Internet. To do this, we need to specify a URL address in the URL launcher in the system menu then you need to find the mac address of the screen to send to eye-in media which will allow the server to find the way to the screen. Follow the steps to configure the SOC Media player:

Step 1. Smart TV Configuration

1. To configure the **URL Launcher**, you need to be out of the Home menu, so select any source to start (PC, HDMI,...).
2. Now open the **Menu**, enter the **System menu**. Scroll down to the list to find the **Play via** option. Select **URL Launcher**. Use the menu key to close it.
3. Press the **Home** key to open the **URL Launcher**
4. Go to **Change URL** and enter the following url: (it is strongly recommended to plug a USB keyboard for this step) <https://gestion.eyeinmedia.com/media/soc>

Step 2. Retrieve Wired Mac Address

1. To configure the Samsung System on Chip on Gestion, you need to retrieve the **Wired Mac Address** of the TV.
2. Make sure the TV is **offline** (unplug LAN cable) Open the **Smart TV Menu**, go to **system** then go to **Samsung contact** option and write the content of the line **Mac Address**.
3. Plug back the **LAN cable**
4. Send email with **Mac Address** and name of the store to team@eyeinmedia.com
Call 1-800-890-4213 ext 317 or ext 302 to continue configuration

Step 3. Gestion configuration (this step is for EyeinMedia graphic department)

Log into **Gestion Media**. Each Smart TV needs to have one computer on Gestion, you will need to create one if it does not exist already. Once you have the page to edit a computer on Gestion, enter the Mac Address you got from the TV without ":", without spaces and in lowercase.

Step 4. Samsung System on Chip (SoC) Media Player

1. On the TV, press the **Home** key to open the **URL Launcher**. Select **URL Launcher**. After some time you will see the Eye-In Média logo. It will download everything required, and start playing.
2. If you only have a white screen, you can display information, using the **Info** key of the remote. You can also restart the media player by using the **red A** button at the bottom of remote control.

Step 5. Display information about the content playing on the TV (optional)

When the player is running, use the **Stop**  button at the bottom of remote control, then press the **Info** button.
